

BUMP ROTATE

Change product orientation quickly and easily with our Bump Rotate add-on.

Easy Reorientation

Intentional obstruction in the path of the product which cause rotation of 90°

Sensor Free

Mechanical design operates without the use of sensing devices, I/O components or powered automation.

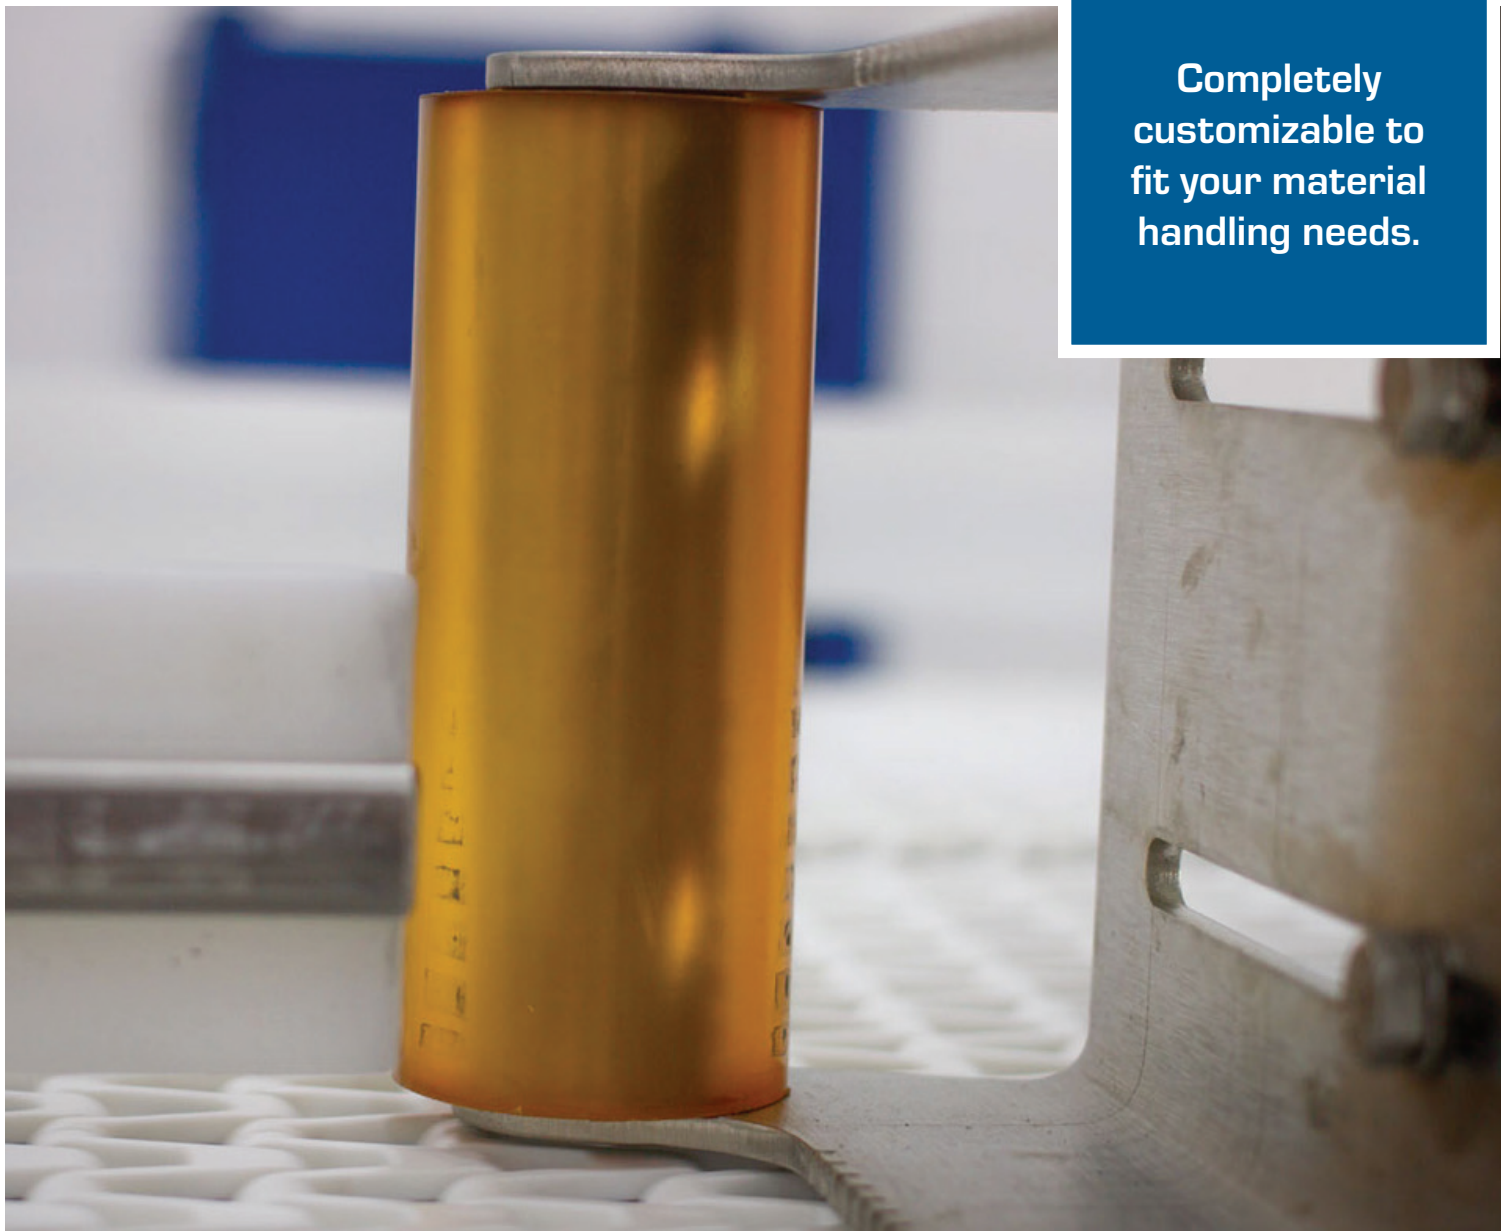

Cost Effective

Simple cost effective add-on for any reorientation need.

Recommended For:

Packaging • Distribution

Completely customizable to fit your material handling needs.

This is a simple and effective way to change product orientation during the transport cycle, for any operation that requires a specific orientation coming off the line. It uses a roller wheel or tab that can be placed on either side of the conveyor, that when impacted by the product rotate it 90°. If a 180° rotation is needed, two Bump Rotates are used in succession. Guide rail spacing can be increased at each rotate point to allow room for the rotation.
