

# VERTICAL SWITCH

## SEAMLESS MULTI LEVEL PRODUCT SORTING

The Span Tech Vertical Switch Conveyor is an innovative solution designed to handle complex, multi-level product sorting and distribution with ease and precision. Actuated by pneumatics or manually switched, Vertical Switch Conveyors Allow for the merging of non-rigid products. It can also be used as a reject.

Unlike traditional conveyors, the Vertical Switch Conveyor offers the flexibility to move products vertically between different conveyor lines or levels.

Vertical Switch conveyors are ideal for industries like food and beverage, pharmaceuticals, packaging, and e-commerce, where efficient and accurate vertical product movement is essential. This space-saving and versatile conveyor solution is engineered to improve throughput, optimize space, and enhance overall operational efficiency.

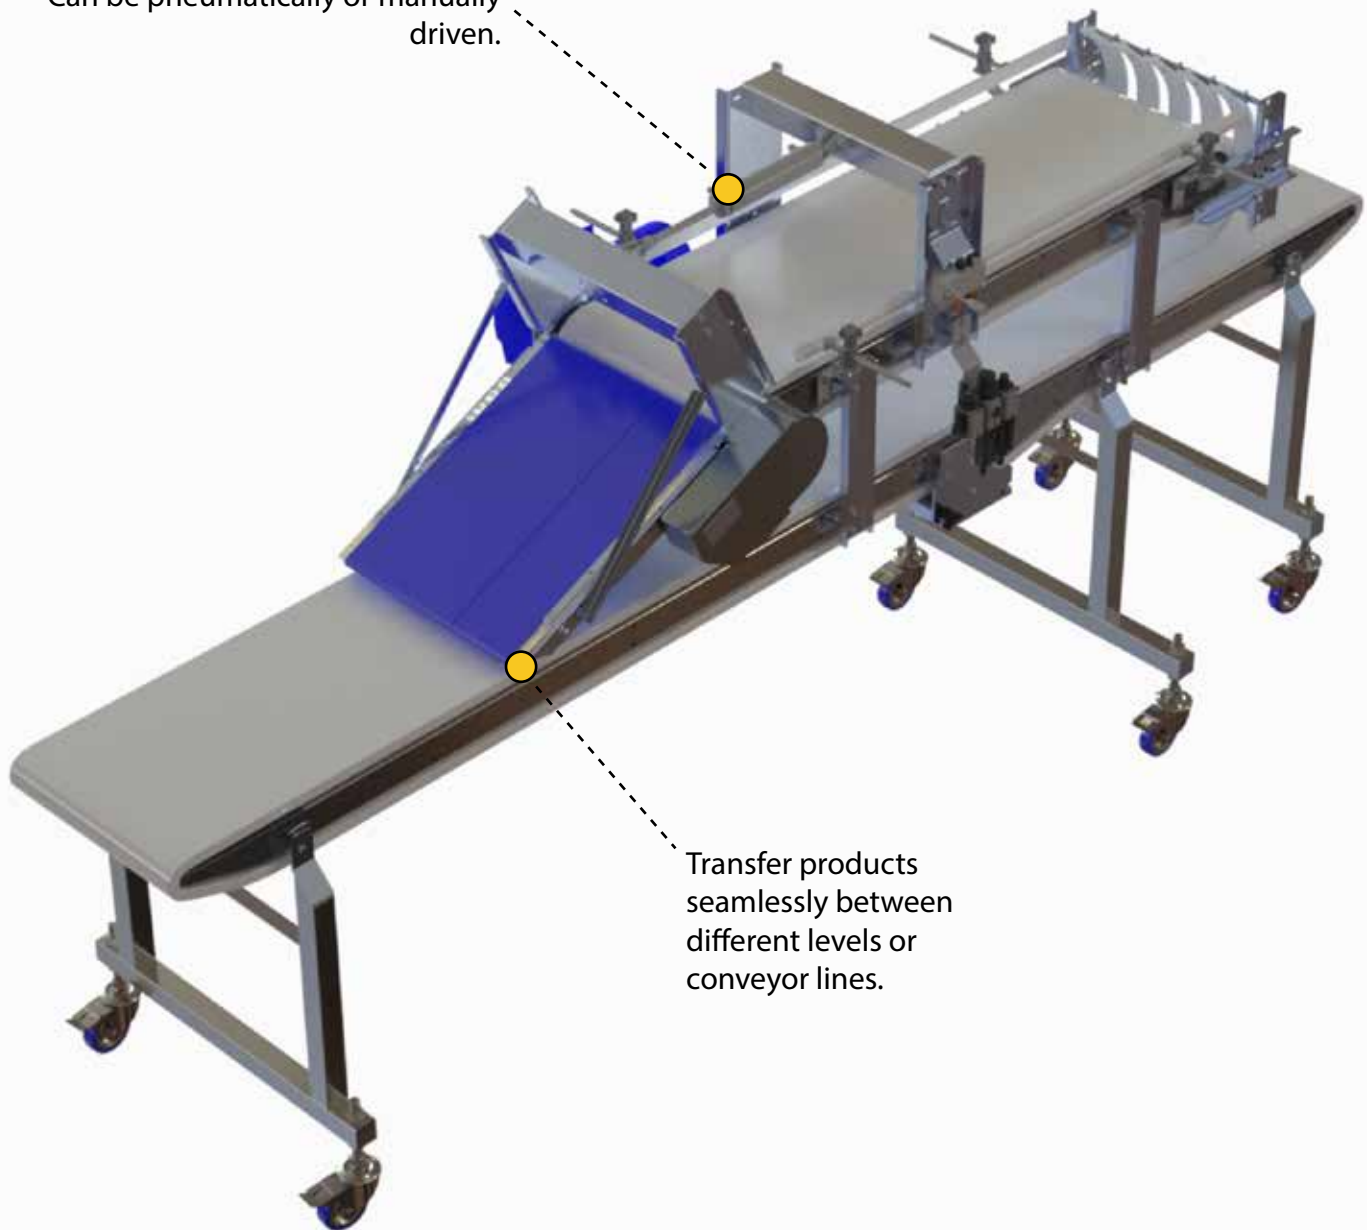

## FEATURES

### COMPARED TO INDUSTRY STANDARDS

- The Vertical Switch Conveyor is designed to transfer products seamlessly between different levels or conveyor lines. This capability allows for efficient sorting, merging, and distributing of products in multi-tiered facilities, maximizing the use of vertical space and optimizing overall production layout.
- One of the standout features of the Vertical Switch Conveyor is its compact footprint, which makes it an ideal solution for facilities with limited floor space. By utilizing vertical space for product sorting and distribution, the Vertical Switch helps businesses optimize their layout without requiring extensive modifications or expansions.

Can be pneumatically or manually driven.

Transfer products seamlessly between different levels or conveyor lines.
