

CONVEYOR SYSTEMS FOR THE FROZEN FOODS INDUSTRY

FROM FREEZER TO PACKAGING

At Span Tech, we design conveyor systems built specifically for the frozen foods industry. From sub-zero freezers to high-speed packaging lines, our conveyors are engineered to perform reliably in cold, challenging environments.

Gentle product handling is at the core of every Span Tech design. Frozen foods can be fragile, so our conveyors provide smooth, controlled transfers that protect product integrity and prevent jams or breakage.

Every frozen food operation is different, which is why we specialize in custom conveyor solutions tailored to your workflow. From spiral conveyors that save space in cold storage to incline and decline systems that connect freezers to packaging areas, our innovative designs are trusted by leading manufacturers worldwide.

With over 40 years of experience, Span Tech is your partner for efficient, hygienic, and reliable frozen food production.
